

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (previously presented): A moving image watermarking method using a human visual system, comprising the steps of:

a) obtaining a watermark value by exclusive-ORing a random key value and a binary value of a logo image;

b) separately performing a plurality of masking operations;

c) obtaining a global masking value through the separately performed masking operations;

d) obtaining a watermarked frame value by adding the watermark value weighted by the global masking value and a control variable, to an original frame value; and

e) inserting a watermark into a moving image frame using the watermarked frame value.

2. (original): The watermarking method according to claim 1, wherein the step b) comprises the steps of:

b1) performing a spatial masking operation; and

b2) performing a motion masking operation.

3. (original): The watermarking method according to claim 2, wherein the step b1) comprises the steps of:

adjusting contrast of the moving image frame; and  
extracting edges from the contrast-adjusted frame.

4. (original): The watermarking method according to claim 2, wherein the step b2) comprises the steps of:

obtaining a luminance difference between a current frame and a previous frame; and  
extracting edges from the current frame.

5. (original): The watermarking method according to claim 2, wherein the step b) further comprises the step of performing a frequency masking operation.

6. (previously presented): The watermarking method according to claim 1, further comprising the steps of:

comparing an image quality of the watermarked frame with an image quality set to a target; and

decreasing the control variable by a predetermined value if the image quality of the frame is less than the target image quality, and increasing the control variable by a predetermined value if the image quality of the frame is greater than the target image quality.

7. (original): The watermarking method according to claim 6, wherein the image quality is estimated on the basis of Peak-Signal-to-Noise Ratio (PSNR).

8. (previously presented): The watermarking method according to claim 1, further comprising the step of f) extracting the watermark, the step f) comprising the steps of:  
subtracting a watermarked frame value from the original frame value; and  
exclusive-ORing the subtracted result value and a random variable obtained by a key value, and obtaining the exclusive-ORed result.

9. (currently amended): A spatial masking method for use in watermarking a moving picture, comprising the steps of:

adjusting contrast of a moving image frame;

extracting edges from the contrast-adjusted frame; and

inserting a watermark in portions of the contrast-adjusted frame from which the edges were extracted; and

storing the extracted edges in a recording medium.

10. (currently amended): A motion masking method for use in watermarking a moving picture, comprising the steps of:

obtaining a luminance difference between a current frame and a previous frame;

extracting edges from the current frame; and

inserting a watermark in portions of the current frame from which the edges were extracted; and

storing the extracted edges in a recording medium.

11. (original): A recording medium for storing computer programs for executing the method of claim 1 in a format readable by computers.

12.-13. (canceled).

14. (previously presented): The watermarking method according to claim 1, wherein the step b) comprises the steps of:  
performing a motion masking operation.

15. (previously presented): The watermarking method according to claim 1, wherein the step b), the plurality of the masking operations are separately performed on identical moving image data.
